

Conference **IUFRO 2023** Latin American

17-19 OCT • Curitiba • Brazil

Sustainable landscape management
the role of forests, trees,
agroforestry and their
interactions with agriculture ●●●

First Announcement

It is a pleasure to announce that the International Union of Forest Research Organizations (IUFRO) and the Brazilian Agricultural Research Corporation (Embrapa), represented by its branch Embrapa Forestry will jointly organize the IUFRO LA-2023, to be held in Curitiba, Brazil from 17 to 19 October 2023.

The conference seeks to bring together a diverse array of stakeholders (from policymakers and scientists to the private sector and rural communities) – in the context of Latin America – for presenting and discussing different initiatives that aim to create future, more resilient landscapes for the benefit of people and nature. Two dimensions will be considered: **a)** the landscape level; and **b)** the farm level or the level of individual management units such as rural farms and/or forest/agroforestry/agriculture enterprises.

It is being programmed as an In-person conference for an audience of between 200 and 250 people, with additional online participation. The conference will include the presentation of invited and voluntary papers (small number), discussion panels, opening, and closing ceremonies.

Please mark your calendars for this important event.

More details will be available soon.
